Fortion[®] TacticalC2

The force's command
software

AIRBUS

A single software adaptable to requirements for deployable operations, compatible with all vehicle and HQ configurations

Fortion[®] TacticalC2 integrated software tools enable the users to send and receive orders, reports, alerts, courses of action, establish ORBAT and monitor a common operational picture including a Blue Force Tracking (BFT) capability.

Automatic data synchronisation between several command posts enables users to simultaneously share relevant information necessary to the preparation and execution of operations.

The software provides a replay mode for Analysis After Action.

The interconnection of Fortion[®] TacticalC2 to on-board weapons systems and sensors enables the sharing of all acquired positions in a common operational picture acquired by a whole range of forces assets.

The software has been already delivered in Tetra and Tetrapol environment.

Benefits

- Shared operational situation
- Adapted to various hardware configurations
- One single software installable on standard personal computers or ruggedized tablets
- Messaging and electronic documentation tools adapted to the soldiers
- 3D views, GUI and map compliant with the latest ergonomics including voice and drawing recognition and a powerful search engine
- Data synchronisation enabling a simple and efficient collaborative mode
- Sensor data sharing between vehicle and command post.
- Usable in coalition environment by respecting NATO standard : APP-6, NVG, NFFI.
- Implementation of user defined templates enabling to customize the CONOPS to the operational needs.
