AIRBUS

Partner with Airbus for On-demand Agricultural Insights

Get the best-in-class service for deriving in-season actionable information utilising imagery, field data and timely alerts.

Key Benefits

Identify emerging health problems in fields before they are visible

Optimise inputs through creation of management zones and VRT maps

Easily navigate to areas with poor crop health with GeoPDF crop health reports

Maximise time through email alerts, directing crop consultants only to fields at risk

Receive enhanced tree level analytics for permanent crops including tree counts

Utilise absolute agronomic indicators for the development of your own advanced analytics

Features

- Automated crop health email alerts
- Fine-tuned algorithms for health assessment of orchards and vineyards at the plant level
- Stand counts for trees and vines
- Premium agronomic analytics from Airbus and public satellites
- **Premium agronomic analytics**
- Creation of management zones and variable rate application maps
- Access to AgNeo components through a web interface or via APIs
